home premium I just recently upgraded my DSLR and bought a Canon EOS 550D. I was able to get a refurbished version of the Canon 550D (with the new eye-control technology (as well as other new features) for a great price. The following is my complete review of the 550D, edited for length, and with some heavy emphasis on the new Eye-control technology. After spending some time shooting on the EOS 550D, I must say that I am impressed with the new features of the 550D...with the new Eye-control technology (as well as other new features) for a great price. The following is my complete review of the 550D, edited for length, and with some heavy emphasis on the new Eye-control technology. After spending some time shooting on the EOS 550D, I must say that I am impressed with the new features of the 550D. I did not find a single major problem with the camera, so I will make this a short review, with detailed discussion of each and every feature of the camera (by clicking the hyperlink for each feature), as well as in-depth examination of the Eye-control technology. I believe that this will be the first review of the 550D where I discuss the new Eye-control technology, because, although the Eye-control technology has been in the new 550D since it was announced, I was not able to use it until the last few days. Since the release of the 550D, my schedule has been very hectic, with several professional photography projects and a lot of other work, so it has been difficult to spend the time necessary to get familiar with this new technology. Until a few days ago, when I finally got time to use it and to investigate it, I have found that this new technology is actually very useful. It is so simple and easy to use, that I was impressed with how well it works. While I did notice some minor bugs with the Eye-control technology, it works better than most other Eye-control technologies. After spending about a week with the camera, I have to say that I am impressed with the Eye-control technology of the 550D. Both the Eye-control features and the EOS 550D with Eye-control features are available on the web site of Canon U.S.A. Although the Eye-control technology in the 550D is advertised as being built-in, it is actually only available with 82157476af
